

## International Nursing License Preparation

### Program Learning Outcomes

Learning outcomes represent culminating demonstrations of learning and achievement. In addition, learning outcomes are interrelated and cannot be viewed in isolation of one another. As such, they should be viewed as a comprehensive whole. They describe performances that demonstrate that significant integrated learning by graduates of the program has been achieved.

The graduate has reliably demonstrated the ability to

1. Provide patient care in accordance with the Professional Standards for Registered Nurses in Ontario, using critical thinking to make decisions based on research and theory.
2. Practice within the legal, ethical and professional scope of practice of nursing for a diverse client population in the province of Ontario as a member of the health care team.
3. Use appropriate technology to contribute to safe, effective and efficient nursing practice.
4. Incorporate reflective practice into the nursing process to identify future implications for the role of a nurse in patient-centered practice.
5. Communicate effectively, and in a culturally competent manner, with clients, peers and other members of the interprofessional health care team at the level required of a health care professional in a therapeutic context.
6. Contribute to the maintenance of health-related documentation and reports at the level required of a health care professional.
7. Practice Integrated Comprehensive Care within a variety of contexts and settings (for individuals, families, and groups) by evaluating and modifying individualized care plans to promote safe and optimal patient care.
